

### E4RS II EVO - Tip 12: Cooling Fan Fixation

To securely maintain a cooling fan on the E4RS II EVO, I decided to create a new fixation hole on the chassis, as Walter Pollet-Villard suggested me.

For this, you have to drill it 9mm closer to the centre of the car than the motor guard fixation hole.

Using a TM507203 motor mount support, you can now screw any 30x30 or 40x40 cooling fan.
