Springs bent to 100 deg - yielded lots of side bite and also a softer initial feel. Change really helped running with XPress 40X tires  
 Other parts within the car - BDL, BW7, BW8, AM105H, ADC, AM180M5/ST118L-1, BW22; BSWorks Fan Mount, WTF3010BH9; Diff measured at 234 on Arrowmax v2 meter  
 Next time: move rear to type 1 and bgap = 3.2 (lower value due to 100 deg bent hard springs); try more steering bumpshims; adjusting AM06 shimming; testing +/- 1mm front lower arm shim; low diff & spool; FBS in Front Rear along with baseline test raising upper links to 3.5mm total height (adding 1.75mm); retesting chassis flex with top decks / rear C26 / AM105H; ESC software tests
