

#303440 ALU ANTI-ROLL BAR COLLARS

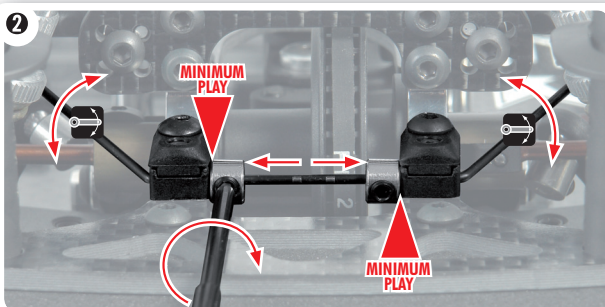

The new alu anti-roll bar collars - for all T2 cars - remove play from the front anti-roll bar wire, which can increase cornering speed and stability.

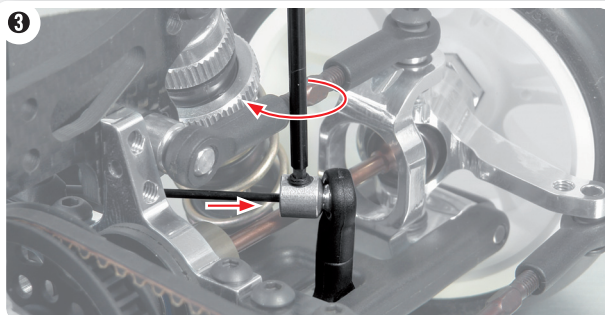

The collars are intended for serious racers who desire the maximum possible performance from their car.

Install the collars on the front anti-roll bar wire between the holders as shown. When tightening the holders, ensure the wire moves freely.

Push the collars outward so they are against the holders as shown. There should be minimal side play in the wire, but the wire should still move freely. Tighten the collar setscrews firmly.

Mount the ball stud on the end of the wire.
